

Lawrence Krauss is director of the Origins Project at ASU and Foundation Professor in the School of Earth and Space Exploration and the Physics Department at Arizona State University. He has won numerous international awards for both his research and his efforts to improve the public understanding of science, he is the only physicist to have received the top awards from all 3 US Physics Societies, and is also the author of 9 books including bestsellers *The Physics of Star Trek* and *A Universe from Nothing*. He is a commentator and essayist for newspapers and appears regularly on radio and television and has recently delved into the film world as executive producer and subject of *The Unbelievers*, a documentary film that discusses science and reason. He is also co-chair of the Board of Sponsors of the Bulletin of the Atomic Scientists and on the board of the Federation of American Scientists.
